To whom it may concern

It's my absolute pleasure to support the application of Jonas Mehtali

I have known Jonas for the last year, as he has spent with us 2 months as Erasmus intern in our Research Group. During this period, he participated in a research project that combined several technologies and disciplines like Web development, HCI and Machine Learning. As a result, a journal paper was published in PeerJ in Computer Science (https://doi.org/10.7717/peerj-cs.1139). As his supervisor, I have had an opportunity to observe his participation, interaction and engagement in the group, and to evaluate Jonas's knowledge related to our field of expertise. He is definitively an outstanding student in all respects. Jonas has proven his skills for hard work, follow through, and team work, giving always a 100% of himself and doing every proposed extension task he could in any of the parts of the project. In all these activities, Jonas demonstrated the high capacity, motivation and initiative, proposing solutions to several problems we found during the development of the project.

Universidad de Oviedo Universidá d'Uviéu University of Oviedo

This opinion is shared with the faculty that was involved in the project.

To summarize, I strongly recommend him to this position

. Do not hesitate to

contact me if you need more information.
